

Books Town

A complete book purchase website made using
HTML/CSS/JavaScript

Book Town is a fully functional website for purchasing books. It was created using HTML, CSS, Bootstrap, and vanilla JavaScript. Users can browse through a variety of books, add them to their cart, and checkout securely. The website also includes a search function and user account management.

The technologies used in the project:

- HTML
- CSS
- Bootstrap
- JavaScript

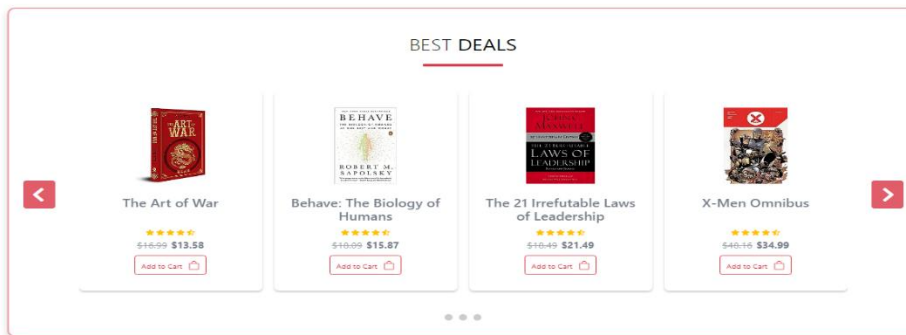

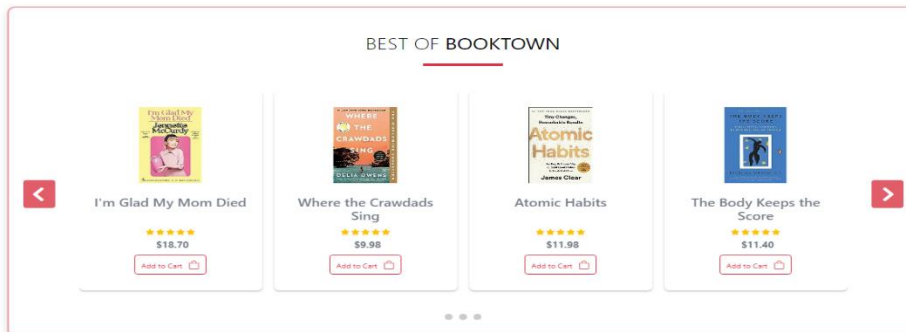

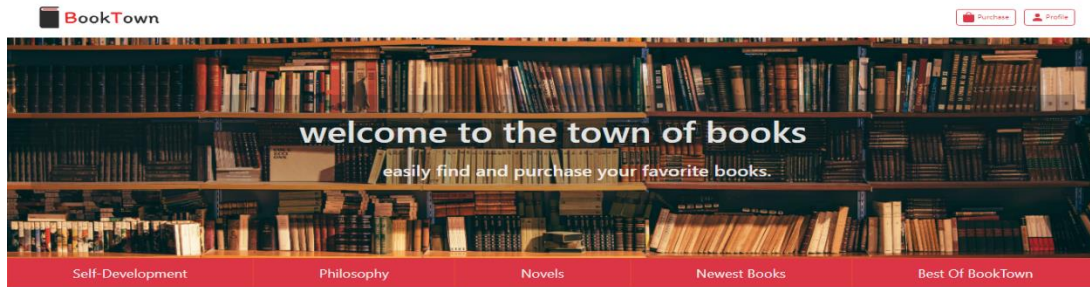

The project includes the following features:

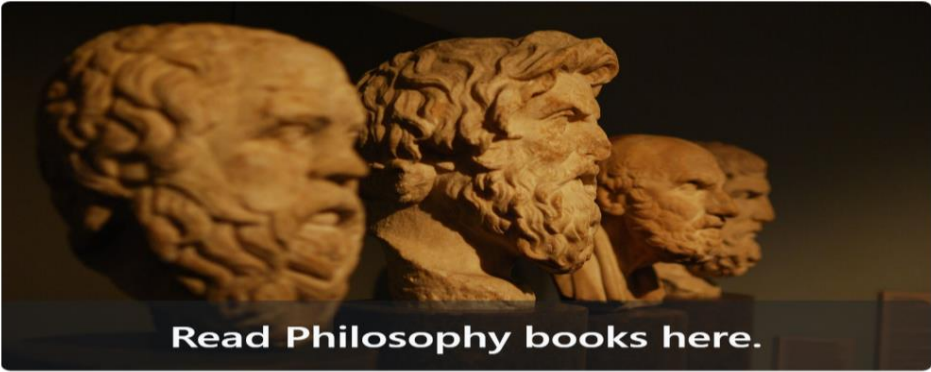

- User authentication and authorization
- Shopping cart
- Order placement
- Payment integration

Installation

To run the **Book Town** Project locally, follow these steps:

- Clone the repository
- Open the index.html file in Home-Page folder in your preferred browser
- Enjoy browsing and purchasing books!
